## WORK SAMPLE PORTFOLIO

The 2012 portfolios are a resource to support teachers in planning and implementation of the Foundation to Year 10 Australian Curriculum in the learning area. Each portfolio comprises a collection of student work illustrating evidence of student learning in relation to the achievement standard. At every year level there are three portfolios illustrating satisfactory, above satisfactory and below satisfactory achievement in relation to the standard.

Each portfolio comprises a collection of different student work selected by state and territory nominees, and annotated and reviewed by classroom teachers and other curriculum experts. Each work sample in the portfolio varies in terms of how much time was available to complete the task and/or the degree of scaffolding provided by the teacher.

There is no pre-determined number of student work samples in a portfolio nor are they sequenced in any particular order. Together as a portfolio, the samples provide evidence of all aspects of the achievement standard unless otherwise specified.

As the Australian Curriculum is progressively implemented in schools, the portfolios will continue to be reviewed and enhanced in relation to their comprehensiveness in coverage of the achievement standard and their representation of the diversity of student work that can be used to highlight evidence of student learning.

## THIS PORTFOLIO – Year 5 Mathematics

This portfolio comprises a number of work samples drawn from a range of assessment tasks, namely:

Sample 1	Geometry – My angle
Sample 2	Measurement – Garden bed
Sample 3	Number – Treasure Hunt
Sample 4	Measurement – How many can you make?
Sample 5	Number – Who are the fastest swimmers?
Sample 6	Measurement – Using time
Sample 7	Measurement – Using perimeter and area
Sample 8	Geometry – Location and transformation
Sample 9	Number – Number sentences
Sample 10	Geometry – Mapping
Sample 11	Statistics and Probability – Come in spinner

This portfolio of student work shows the measurement and construction of different angles (WS1), comparison of the sizes of fractions by diagrams and calculations and their representation on a number line (WS2, WS5). The student solves problems using the four operations (WS3, WS9) and makes spinners to assist in carrying out simple probability experiments before evaluating the results (WS 11). The student investigates the areas and perimeters of different rectangles (WS7). The student explains the effect of transformations (WS8), locates axes of symmetry of shapes and describes the features of three-dimensional objects using two-dimensional representations (WS4). The student creates maps, locates landmarks and describes directions to locations (WS10). The student converts between 12 and 24 hour time (WS6).

# Mathematics

Year 5

Above Satisfactory

The annotated samples in this portfolio provide evidence of most (but not necessarily all) aspects of the achievement standard. The following aspect/s of the achievement standard are not evident in this portfolio:

- *explain plans for simple budgets*
- *use appropriate units of measurement for volume, capacity and mass*
- *check the reasonableness of answers using estimation and rounding.*

# Mathematics

# Year 5

Above Satisfactory

## Geometry – My angle

### Relevant parts of the achievement standard

*By the end of Year 5, students solve simple problems involving the four operations using a range of strategies. They check the reasonableness of answers using estimation and rounding. Students identify and describe factors and multiples. They explain plans for simple budgets. Students connect three-dimensional objects with their two-dimensional representations. They describe transformations of two-dimensional shapes and identify line and rotational symmetry. Students compare and interpret different data sets.*

*Students order decimals and unit fractions and locate them on number lines. They add and subtract fractions with the same denominator. Students continue patterns by adding and subtracting fractions and decimals. They find unknown quantities in number sentences. They use appropriate units of measurement for length, area, volume, capacity and mass, and calculate perimeter and area of rectangles. They convert between 12 and 24 hour time. Students use a grid reference system to locate landmarks. They measure and construct different angles. Students list outcomes of chance experiments with equally likely outcomes and assign probabilities between 0 and 1. Students pose questions to gather data, and construct data displays appropriate for the data.*

### Summary of task

Students had completed a unit of work on angles and their properties. They were given the following problems to solve:

- *Can you estimate and draw an angle of approximately  $135^\circ$  without using a protractor?*
- *I looked at the clock before school and noticed that the hands made an acute angle. What time could it be?*
- *I looked at the clock before school and noticed that the hands made a right angle. What time could it be? How do you know that you are right?*
- *I looked at the clock before school and noticed that the hands made a reflex angle. What time could it be? How do you know that you are right?*

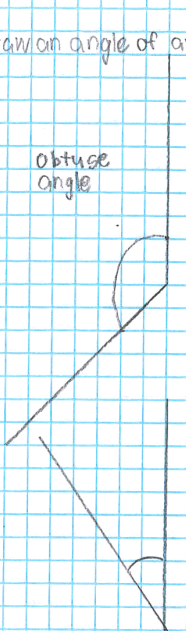

# Mathematics

# Year 5

Above Satisfactory

## Geometry – My angle

Task 1. draw an angle of approximately  $135^\circ$

obtuse angle

What strategies did you use to draw your angle?  
I made an angle of  $180^\circ$  then subtracted  $45^\circ$ .  
How do you know what angle this is?  
I know an obtuse angle is between  $91^\circ$  and  $179^\circ$ .  
Can you use a protractor to check if you are right?  
Yes I can, and I did, and it was  $135^\circ$ .  
Can you use similar strategies to try and draw a  
angle of  $30^\circ$ ?  
Yes I can, and I did, and it was  $34^\circ$ .

Task 2. What time could it be before school so that the hands create an acute angle? 8:30

What other possible answers are there? 6:25, 7:40, 6:40.  
How will you record your answers? by writing it down  
How do you know you are right? because I know an acute angle is less than  $90^\circ$   
Are there some clock times before school that would not make an acute angle?  
yes. 7:10, 12:00, 9:50  
I looked at the clock before school and noticed the hands made a right angle.  
What time could it be? 6:45, 7:10, 8:25  
how do you know you are right? because I know that a right angle is  $90^\circ$   
I looked at the clock before school and noticed that the hands made a reflex angle. What time could it be? 12:05, 1:10, 4:25  
how do you know you are right? because I know that a reflex angle is between  $181^\circ$  and  $199^\circ$ .

## Annotations

Identifies types of angles.

Explains strategies in estimating angles using mathematical language.

Identifies characteristics of angles.

Makes accurate estimations to construct angles.

Uses a protractor to accurately measure angles.

Uses characteristics of angles to support explanations.

Recognises the turn of an angle doesn't change the angle measurement.

## Measurement – Garden bed

Task 1: Fractions

$\frac{5}{15} + \frac{10}{15} = 1$

$\frac{3}{8} + \frac{2}{8} - \frac{4}{8} + \frac{2}{8} = \frac{3}{8}$

$\frac{4}{15} + \frac{6}{15} = \frac{7}{15}$

$\frac{5}{15} + \frac{7}{15} - \frac{2}{15} + \frac{5}{15} = 1$

$\frac{3}{8} + \frac{1}{8} = \frac{1}{2}$

$\frac{2}{3} + \frac{1}{3} = \frac{2}{3} + \frac{1}{3} - \frac{1}{3} - \frac{1}{3} = 0$

### Annotations

Calculates addition and subtraction of fractions with a variety of denominators.

Divides a shape into a number of different equal parts.

Students list outcomes of chance experiments with equally likely outcomes and assign probabilities between 0 and 1. Students pose questions to gather data, and construct data displays appropriate for the data.*

### Summary of task

Students had been studying a unit of work based on data from the Olympic Games. They had become familiar with ordering decimals on a number line, time in seconds, tenths of seconds and hundredths of seconds.

Students were given tables with information about the results of the Men's 100m Freestyle Semi-Finals from the London Olympic Games. They were asked to order the results from fastest to slowest, complete some further ordering of decimals and locate them on a number line. Students were also asked to think about what could be done in one hundredth of a second.

## Number – Who are the fastest swimmers?

### Annotations

#### Who Were the Fastest 100m Swimmers of 2012?

The tables below contain information from the Men's 100m Freestyle Semi-Finals from the 2012 London Olympic Games.

#### Task 1

Order the results from fastest to slowest performance, 1<sup>st</sup>-16<sup>th</sup> place.

#### Semi-Final 1

Lane	Athlete	Country	Time in Seconds	Placing
01	GILOT Fabien	France	48.49	10 <sup>th</sup>
02	CIELO Cesar	Brazil	48.17	5 <sup>th</sup>
03	FRASER Brett	Cayman islands	48.92	15 <sup>th</sup>
04	LOUW Gideon	South Africa	48.44	9 <sup>th</sup>
05	MAGNUSSEN James	Australia	47.63	1 <sup>st</sup>
06	LOBINTSEV Nikita	Russia	48.38	8 <sup>th</sup>
07	ROBERTS James	Australia	48.57	12 <sup>th</sup>
08	FRASER Shaune	Cayman Islands	49.07	16 <sup>th</sup>

#### Semi-Final 2

Lane	Athlete	Country	Time in seconds	Placing
01	AGNEL Yannick	France	48.23	7 <sup>th</sup>
02	JONES Cullen	USA	48.60	14 <sup>th</sup>
03	HAYDEN Brent	Canada	48.21	6 <sup>th</sup>
04	ADRIAN Nathan	USA	47.97	2 <sup>nd</sup>
05	VERSCHUREN Sebastiaan	Netherlands	48.13	4 <sup>th</sup>
06	TIMMERS Pieter	Belgium	48.57	12 <sup>th</sup>
07	CZERNIAK Konrad	Poland	48.44	9 <sup>th</sup>
08	GARCIA Hanser	Cuba	48.04	3 <sup>rd</sup>

Orders decimals from lowest to highest.

### Number – Who are the fastest swimmers?

#### Who Were the Fastest 100m Swimmers of 2012?

##### Task 2

- i) Calculate the athletes with the 8 fastest times and record them in the final, in the correct lanes.

The current world record for the 100m men's freestyle is 46.91 seconds set by Cesar Cielo in Rome on 30/07/09.

- ii) Calculate the difference between each athlete's semi-final at the London Olympics and compare it to the current world record. Record the difference in the table.

##### Final

Lane		Athlete	Difference World Record Time
Lane 1	7 <sup>th</sup> fastest	Agnel Yannick	+1.32 + 1.30 secs
Lane 2	5 <sup>th</sup> fastest	Cesar Cielo	+1.26
Lane 3	3 <sup>rd</sup> fastest	Hanser Garcia	+1.13
Lane 4	1 <sup>st</sup> fastest	James Magnussen	+0.72
Lane 5	2 <sup>nd</sup> fastest	Nathan Adrian	+1.06
Lane 6	4 <sup>th</sup> fastest	Sebastiaan Verschuren	+1.22
Lane 7	6 <sup>th</sup> fastest	Brent Haden	+1.30
Lane 8	8 <sup>th</sup> fastest	Nikita Lobentsev	+1.47

#### Annotations

Compares two decimals to calculate the difference.

Constructs and orders decimals on a number line to the hundredth place.

Locates decimals accurately on a number line.

## Measurement – Using time

### Relevant parts of the achievement standard

*By the end of Year 5, students solve simple problems involving the four operations using a range of strategies. They check the reasonableness of answers using estimation and rounding. Students identify and describe factors and multiples. They explain plans for simple budgets. Students connect three-dimensional objects with their two-dimensional representations. They describe transformations of two-dimensional shapes and identify line and rotational symmetry. Students compare and interpret different data sets.*

*Students order decimals and unit fractions and locate them on number lines. They add and subtract fractions with the same denominator. Students continue patterns by adding and subtracting fractions and decimals. They find unknown quantities in number sentences. They use appropriate units of measurement for length, area, volume, capacity and mass, and calculate perimeter and area of rectangles. They convert between 12 and 24 hour time. Students use a grid reference system to locate landmarks. They measure and construct different angles. Students list outcomes of chance experiments with equally likely outcomes and assign probabilities between 0 and 1. Students pose questions to gather data, and construct data displays appropriate for the data.*

### Summary of task

Students had spent a week focusing on comparing and representing 12 and 24 hour time.

They were asked to create a timeline of a typical day in their lives in 12 and 24 hour time and record their day using both digital and analogue time. They completed this task in a half hour time slot.

# Mathematics

Year 5  
Above Satisfactory

## Measurement – Using time

### Year 5 Time

Use the boxes below to show a typical day in your life. Underneath each box record the time that each event happened in 12hr time, 24 hr time and in analogue time

	Wake up	Breakfast	Bus to school	School starts	School finishes	Soccer practice	Dinner	Bed
12hr	6:15 am	7:15 am	8 am	$\frac{1}{4}$ to 9 8:45 am	$\frac{1}{4}$ past 3 3:15 pm	4:00 pm	6:33 pm	8:30 pm
24hr	6:15	7:15	8:00	8:45	15:15	16:00	18:33	20:30

If you use 12 hour time without am or pm you could get confused about morning or night. You could miss your train or your flight if you get the morning and night mixed up. 24 hour time is good so that everyone knows what the real time is. The army use 24 hour time so the troops knew when to attack.

### Annotations

Records and converts 12 hour to 24 hour time.

Explains the reason for the use of 24 hour time.

#### Acknowledgement

ACARA acknowledges the contribution of Australian teachers and education authorities in providing the tasks and work samples. The annotations are referenced to the Australian Curriculum achievement standards.

## Measurement – Using perimeter and area

## Relevant parts of the achievement standard

*By the end of Year 5, students solve simple problems involving the four operations using a range of strategies. They check the reasonableness of answers using estimation and rounding. Students identify and describe factors and multiples. They explain plans for simple budgets. Students connect three-dimensional objects with their two-dimensional representations. They describe transformations of two-dimensional shapes and identify line and rotational symmetry. Students compare and interpret different data sets.*

*Students order decimals and unit fractions and locate them on number lines. They add and subtract fractions with the same denominator. Students continue patterns by adding and subtracting fractions and decimals. They find unknown quantities in number sentences. They use appropriate units of measurement for length, area, volume, capacity and mass, and calculate perimeter and area of rectangles. They convert between 12 and 24 hour time. Students use a grid reference system to locate landmarks. They measure and construct different angles. Students list outcomes of chance experiments with equally likely outcomes and assign probabilities between 0 and 1. Students pose questions to gather data, and construct data displays appropriate for the data.*

## Summary of task

Students had completed a unit of work on perimeter and area. They had been given opportunities to practise measuring objects using millimetres, centimetres, metres and calculate area using  $\text{cm}^2$  and  $\text{m}^2$ .

Students were asked to define area and perimeter and explain how each is calculated. They were then asked to choose shapes to measure and to calculate the perimeter and area of each. They were also asked to identify what units should be used to measure the length of items.

# Mathematics

# Year 5

Above Satisfactory

## Measurement – Using perimeter and area

### Using Perimeter and Area

What is perimeter? How can you work it out?

A perimeter is how far the outside of something like a shape.  
To work out the perimeter you have to add.

What is area? How can you work it out?

An area is the inside of something.  
To work out the area you have to times the outside, you can make the shape two shapes and then add it.

What unit should you use to measure the perimeter of these items?

Chess Board cm

Soccer Pitch m

Window cm

Chewing Gum Packet cm

House Floor Plan m

What unit should you use to measure the area of these items?

Car Park m

Sand Pit m

Book Cover cm

Mobile Phone cm

Front of House m

Choose an object whose perimeter you can measure using CENTIMETERS. Measure it and record how you did it. Use a diagram to help you. Then calculate the area of the object. Explain how you worked it out.

I used a ruler to work out the perimeter, and then timesed the perimeter to get the area.

$$\begin{array}{r} 28 \\ \times 21 \\ \hline 588 \end{array}$$

Perimeter = 98cm  
Area = 588cm<sup>2</sup>

$$\begin{array}{r} 28 \\ -21 \\ \hline 7 \\ \times 21 \\ \hline 158 \end{array}$$

Choose an object whose perimeter you can measure using METRES. Measure it and record how you did it. Use a diagram to help you. Then calculate the area of the object. Explain how you worked it out.

$$\begin{array}{r} 143 \\ \times 129 \\ \hline 1258 \\ 17580 \\ \hline 18547 \end{array}$$

Basketball court  
= 158m

I walked around the whole basketball court with a trundle wheel. Every time it clicked that means it has been 1 meter.  
Perimeter = 158m  
Area = 1548m<sup>2</sup>

### Annotations

Explains how to calculate area and perimeter.

Calculates area and perimeter of more complex shapes.

Chooses appropriate units to measure items.

Calculates area and perimeter of four sided figures.

Students continue patterns by adding and subtracting fractions and decimals. They find unknown quantities in number sentences. They use appropriate units of measurement for length, area, volume, capacity and mass, and calculate perimeter and area of rectangles. They convert between 12 and 24 hour time. Students use a grid reference system to locate landmarks. They measure and construct different angles. Students list outcomes of chance experiments with equally likely outcomes and assign probabilities between 0 and 1. Students pose questions to gather data, and construct data displays appropriate for the data.*

### Summary of task

Students had completed a unit of work about line and rotational symmetry, translation, rotation, reflection and the enlargement transformation of two-dimensional shapes.

Students were asked to draw two-dimensional shapes and follow the language of position to transform, enlarge and record the lines of symmetry in the shapes. They were then asked to enlarge a two-dimensional shape using grid paper.

## Geometry – Location and transformation

### Location & Transformation – Year 5

- Draw three different 2 dimensional shapes in the first column.
- In the first row, show how the shape can be translated in different ways. Describe what you did.
- In the second row, show how the shape can be rotated in different ways. Describe what you did.
- In the third row, show how the shape can be reflected. Describe what you did.
- Show how many lines of symmetry each shape has.

Shape 1 (Translate)		moved to right 	moved to right and then up 	moved down 
Shape 2 (Rotate)		rotated 20° in clockwise direction 	rotated 180° 	rotated 225° 
Shape 3 (Reflect)		reflected 	flipped 	reflected 

On the left side of the grid draw a simple picture. Enlarge the same picture on the right side of the grid. By how much have you enlarged it? Explain your thinking.

I have made the shape double its size. Each side is twice as long but the area is 4 times as much → could be 2 squared.

### Annotations

Demonstrates various ways to translate. Recognises that the shape remains constant.

Demonstrates rotation around a point and nominates the angle through which the rotation has occurred.

Displays various ways that a reflection can be done.

Demonstrates an insightful approach into what happens to area when a shape is enlarged.

### Acknowledgement

ACARA acknowledges the contribution of Australian teachers and education authorities in providing the tasks and work samples. The annotations are referenced to the Australian Curriculum achievement standards.

## Number – Number sentences

### Number Sentences

Instructions!

- Choose 15 different numbers between 0 and 100
- Express each number in two different ways using mixed operations

	Number	First way	Second way
	Eg. 3	$3 = 6 \times 4 - 3 \times 7$	$3 = 56 \div 7 \div 2 - 1$
1.	11	$= 9 \times 9 - 10 \times 7$	$= 15 + 29 \div 4$
2	22	$= 9 \times 8 - 5 \times 10$	$= 11 \times 4 - 11 \times 2$
3	33	$= 28 + 53 - 8 \times 6$	$= 121 \div 11 \times 3$
4	44	$= 2 \times 2 \times 11$	$= 136 \div 17 \div 2 \times 11$
5	55	$= 7 + 4 \times 3 + 2$	$= 222 - 123 - 44$
6	66	$= 9 \times 9 - 15$	$= 90 \div 3 \times 2 + 6$
7	77	$= 7 \times 3 + 7 \times 8$	$= 21 \div 3 \times 15 - 4$
8	88	$= 14 + 8 \times 4$	$= 360 \div 2 \div 6 + 58$
9	99	$= 228 \div 2 - 15$	$= 3 \times 11 \times 3$
10	80	$= 12 \times 10 - 40$	$= 100 + 100 - 30 \times 4$
11	70	$= 7 \times 7 + 21$	$= 10 \times 10 - 30$
12	60	$= 99 \div 3 \div 11 \times 20$	$= 5 \times 6 \times 2$
13	50	$= 120 \div 12 \times 5$	$= 10 - 5 \times 13 - 3$
14	40	$= 88 \div 4 + 8 + 10$	$= 2 \times 2 \times 10$
15	30	$= 2 \times 6 + 3 \times 6$	$= 60 \div 10 \times 5$

### Annotations

Chooses varied ways to describe a number.

Adheres to order of operations conventions.

Students use a grid reference system to locate landmarks. They measure and construct different angles. Students list outcomes of chance experiments with equally likely outcomes and assign probabilities between 0 and 1. Students pose questions to gather data, and construct data displays appropriate for the data.*

### Summary of task

Students had studied maps and used a compass.

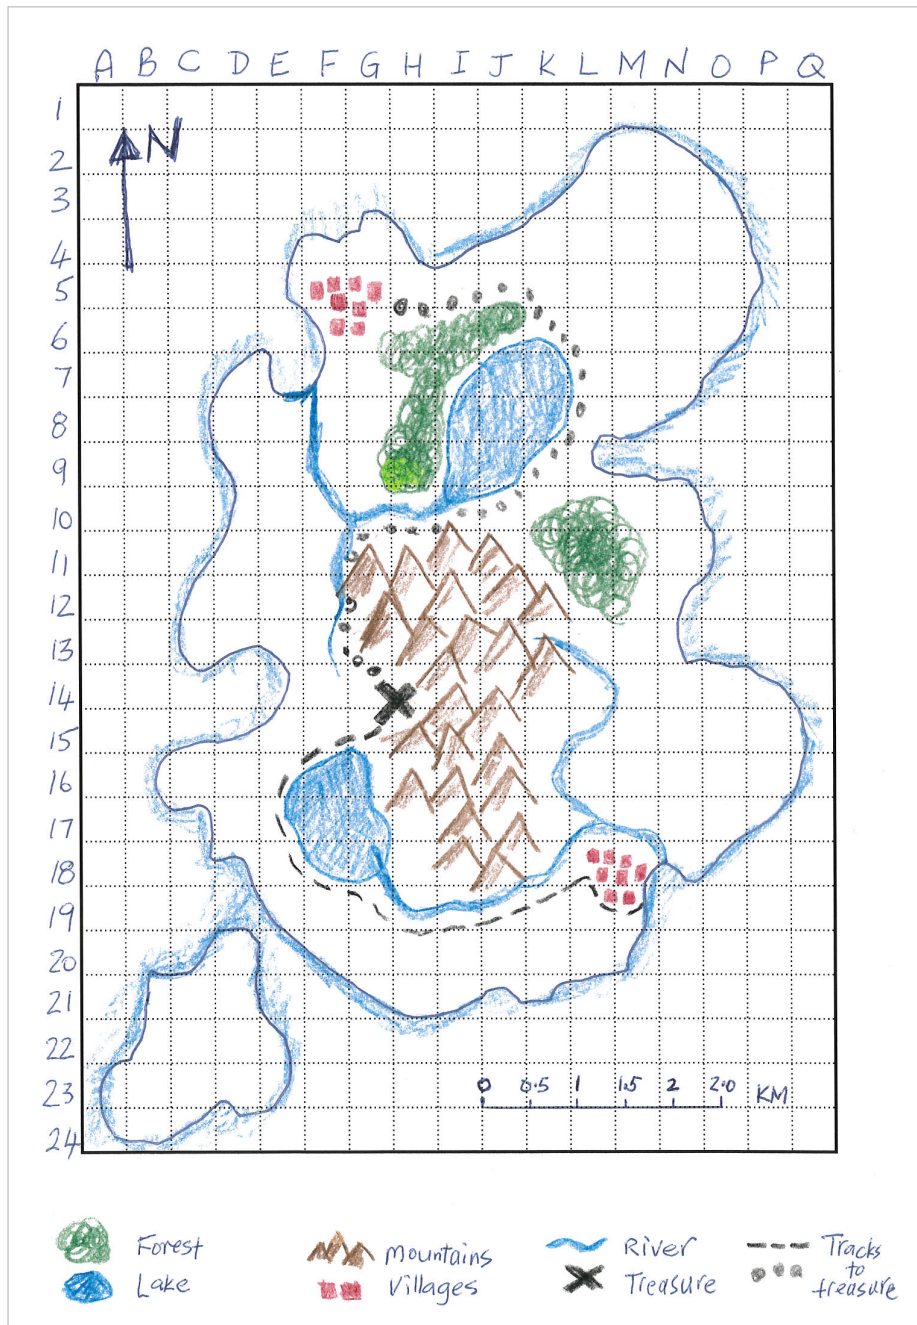

Students were asked to draw a treasure island map, to create a scale and compass rose, and to impose a grid and coordinates. They were required to write a set of directions, using compass points or grid coordinates, to the location of a hidden treasure on their map. Students exchanged maps and followed the directions to find the treasure. They were encouraged to comment on the scale used.

Students use a grid reference system to locate landmarks. They measure and construct different angles. Students list outcomes of chance experiments with equally likely outcomes and assign probabilities between 0 and 1. Students pose questions to gather data, and construct data displays appropriate for the data.*

### Summary of task

This task was the culmination of a series of activities dealing initially with the language of chance and then conducting simple chance experiments. The students had discussed fair and unfair spinners and the numerical chance of a particular result happening.

Students were required to make 3 spinners. One of the spinners had 4 colours but there was not an equal chance of spinning each colour. The second spinner had 6 numbers on it with an equal chance of spinning each number and the third spinner had 6 numbers on it with an unequal chance of spinning each of the numbers. Students were required to pose questions, predict the chance of the outcomes and then conduct the task. Students were asked to record all answers in tables and graphs. After completing the task students compared their results to other class members and interpreted the results.

## Statistics and Probability – Come in spinner

Spinners Predictions

1. I think green will come up more than the other colours because there are 3 sections of green as opposed to only 1 blue, 1 purple and 1 orange. Green should be spun 3 times as much as the other colours.
2. All the colours will have an equal chance of being spun because there are 2 of each colour.
3. There are 2 sixes and only one of each of the other numbers. You would think that there was a better chance of getting a 6 than the other numbers.

## Annotations

*Makes informed predictions about the possible results of the experiment for different specified spinners.*

### Statistics and Probability – Come in spinner

Spinner 1.

Colour	Tally	Total
Green		11
Blue		4
Orange		2
Purple		3

There are more green as I predicted

Spinner 2

Colour	Tally	Total Number
Red		5
Yellow		8
Blue		7

The numbers are not quite the same. This is because things just don't turn out the way you think they will

Spinner 3

Number	Tally	Total
1		3
2		4
3		3
5		3
6		7

There are more 6's as I thought 6 has a bigger chance because it happens 2 times on the spinner

#### Annotations

Records the results of the experiment using tally marks and totals.

Analyses results and relates them to the chance each had of occurring.
