WORK SAMPLE PORTFOLIO

The 2012 portfolios are a resource to support teachers in planning and implementation of the Foundation to Year 10 Australian Curriculum in the learning area. Each portfolio comprises a collection of student work illustrating evidence of student learning in relation to the achievement standard. At every year level there are three portfolios illustrating satisfactory, above satisfactory and below satisfactory achievement in relation to the standard.

Each portfolio comprises a collection of different student work selected by state and territory nominees, and annotated and reviewed by classroom teachers and other curriculum experts. Each work sample in the portfolio varies in terms of how much time was available to complete the task and/or the degree of scaffolding provided by the teacher.

There is no pre-determined number of student work samples in a portfolio nor are they sequenced in any particular order. Together as a portfolio, the samples provide evidence of all aspects of the achievement standard unless otherwise specified.

As the Australian Curriculum is progressively implemented in schools, the portfolios will continue to be reviewed and enhanced in relation to their comprehensiveness in coverage of the achievement standard and their representation of the diversity of student work that can be used to highlight evidence of student learning.

THIS PORTFOLIO – Year 5 Mathematics

This portfolio comprises a number of work samples drawn from a range of assessment tasks, namely:

Sample 1	Geometry – My angle
Sample 2	Measurement – Garden bed
Sample 3	Number – Treasure Hunt
Sample 4	Measurement – How many can you make?
Sample 5	Number – Who are the fastest swimmers?
Sample 6	Measurement – Using time
Sample 7	Measurement – Using perimeter and area
Sample 8	Geometry – Location and transformation
Sample 9	Number – Number sentences
Sample 10	Geometry – Mapping
Sample 11	Statistics and Probability – Come in spinner

This portfolio of student work shows the measurement and construction of different angles (WS1), comparison of the sizes of fractions by diagrams and calculation and their representation on a number line (WS2, WS5). The student solves problems using the four operations (WS3, WS9) and makes spinners to assist in carrying out simple probability experiments before evaluating the results (WS 11). The student investigates the areas and perimeters of different rectangles (WS7). The student explains the effect of transformations (WS8), locates axes of symmetry of shapes and describes the features of three-dimensional objects using two-dimensional representations (WS4). The student creates maps, locates landmarks and describes directions to locations (WS10). The student converts between 12 and 24 hour time (WS6).

Mathematics

Year 5

Below Satisfactory

The annotated samples in this portfolio provide evidence of most (but not necessarily all) aspects of the achievement standard. The following aspect/s of the achievement standard are not evident in this portfolio:

- *explain plans for simple budgets*
- *compare and interpret different data sets*
- *use appropriate units of measurement for volume, capacity and mass*
- *assign probabilities between 0 and 1*
- *pose questions to gather data*
- *check the reasonableness of answers using estimation and rounding.*

Mathematics

Year 5

Below Satisfactory

Geometry – My angle

Relevant parts of the achievement standard

By the end of Year 5, students solve simple problems involving the four operations using a range of strategies. They check the reasonableness of answers using estimation and rounding. Students identify and describe factors and multiples. They explain plans for simple budgets. Students connect three-dimensional objects with their two-dimensional representations. They describe transformations of two-dimensional shapes and identify line and rotational symmetry. Students compare and interpret different data sets.

Students order decimals and unit fractions and locate them on number lines. They add and subtract fractions with the same denominator. Students continue patterns by adding and subtracting fractions and decimals. They find unknown quantities in number sentences. They use appropriate units of measurement for length, area, volume, capacity and mass, and calculate perimeter and area of rectangles. They convert between 12 and 24 hour time. Students use a grid reference system to locate landmarks. They measure and construct different angles. Students list outcomes of chance experiments with equally likely outcomes and assign probabilities between 0 and 1. Students pose questions to gather data, and construct data displays appropriate for the data.

Summary of task

Students had completed a unit of work on angles and their properties. They were given the following problems to solve:

- *Can you estimate and draw an angle of approximately 135° without using a protractor?*
- *I looked at the clock before school and noticed that the hands made an acute angle. What time could it be?*
- *I looked at the clock before school and noticed that the hands made a right angle. What time could it be? How do you know that you are right?*
- *I looked at the clock before school and noticed that the hands made a reflex angle. What time could it be? How do you know that you are right?*

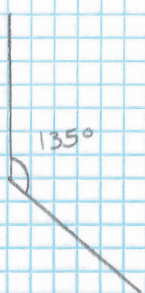

Mathematics

Year 5

Below Satisfactory

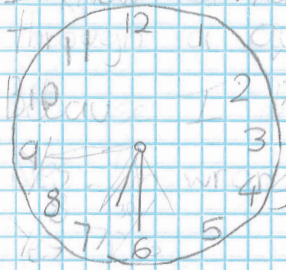

Geometry – My angle

TASK 1

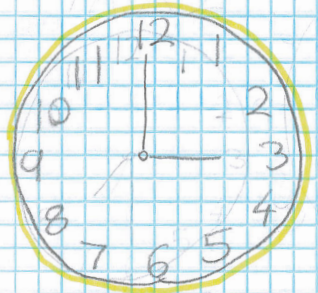

I knew that half is 180° so 135° is half-way through a quarter
Because I learnt it in class
Yes, I'm wrong
Yes 30°

TASK 2

6:30am
In clock version
Yes, for example 7:00am
Because I know what time school starts and what a acute angle is

3:00am
Because I know what a right angle is and the time school starts

Annotations

Estimates and constructs an angle.

Numbers – Treasure Hunt

Relevant parts of the achievement standard

By the end of Year 5, students solve simple problems involving the four operations using a range of strategies. They check the reasonableness of answers using estimation and rounding. Students identify and describe factors and multiples. They explain plans for simple budgets. Students connect three-dimensional objects with their two-dimensional representations. They describe transformations of two-dimensional shapes and identify line and rotational symmetry. Students compare and interpret different data sets.

Students order decimals and unit fractions and locate them on number lines. They add and subtract fractions with the same denominator. Students continue patterns by adding and subtracting fractions and decimals. They find unknown quantities in number sentences. They use appropriate units of measurement for length, area, volume, capacity and mass, and calculate perimeter and area of rectangles. They convert between 12 and 24 hour time. Students use a grid reference system to locate landmarks. They measure and construct different angles. Students list outcomes of chance experiments with equally likely outcomes and assign probabilities between 0 and 1. Students pose questions to gather data, and construct data displays appropriate for the data.

Summary of task

Students were given the following problem to solve after completing a unit of work on multiplication, division, factors and multiples:

- *Our teacher is planning a treasure hunt for teams of students in Year 5 and Year 6. There are 48 Year 5 students and 60 Year 6 students. Each team has to have equal numbers and team members are from the same year level.*
- *What are all the possible team sizes that can participate in the treasure hunt?*
- *What are the largest possible group sizes that our teacher can have?*

Students use a grid reference system to locate landmarks. They measure and construct different angles. Students list outcomes of chance experiments with equally likely outcomes and assign probabilities between 0 and 1. Students pose questions to gather data, and construct data displays appropriate for the data.

Summary of task

Students had been studying a unit of work based on data from the Olympic Games. They had become familiar with ordering decimals on a number line, time in seconds, tenths of seconds and hundredths of seconds.

Students were given tables with information about the results of the Men's 100m Freestyle Semi-Finals from the London Olympic Games. They were asked to order the results from fastest to slowest. They then completed further ordering of decimals and located them on a number line. Students were also asked to think about what could be done in one hundredth of a second.

Students use a grid reference system to locate landmarks. They measure and construct different angles. Students list outcomes of chance experiments with equally likely outcomes and assign probabilities between 0 and 1. Students pose questions to gather data, and construct data displays appropriate for the data.

Summary of task

Students had completed a unit of work on perimeter and area. They had been given opportunities to practise measuring objects using millimetres, centimetres, metres and calculate area using cm^2 and m^2 .

Students were asked to define area and perimeter and explain how each is calculated. They were then asked to choose shapes to measure and to calculate the perimeter and area of each. They were also asked to identify what units should be used to measure the length of items.

Mathematics

Year 5

Below Satisfactory

Measurement – Using perimeter and area

Annotations

Using Perimeter and Area

What is perimeter? How can you work it out?

Perimeter is where you get a shape like a square and then you count how many squares in the shape then add them up.

What is area? How can you work it out?

area is where you draw a shape and 800 together like 800 the you add 1180 then you add 800 and 1180 like 2360 and 1180 like 3540

What unit should you use to measure the perimeter of these items?

What unit should you use to measure the area of these items?

Choose an object whose perimeter you can measure using **CENTIMETERS**. Measure it and record how you did it. Use a diagram to help you. Then calculate the area of the object. Explain how you worked it out.

Choose an object whose perimeter you can measure using **METRES**. Measure it and record how you did it. Use a diagram to help you. Then calculate the area of the object. Explain how you worked it out.

Selects appropriate formal units to measure objects.

Demonstrates understanding of area and perimeter but confuses the rules when calculating.

Students use a grid reference system to locate landmarks. They measure and construct different angles. Students list outcomes of chance experiments with equally likely outcomes and assign probabilities between 0 and 1. Students pose questions to gather data, and construct data displays appropriate for the data.

Summary of task

Students had completed a unit of work about line and rotational symmetry, translation, rotation, reflection and the enlargement transformation of two-dimensional shapes.

Students were asked to draw two-dimensional shapes and follow the language of position to transform, enlarge and record the lines of symmetry in the shapes. They were then asked to enlarge a two-dimensional shape using grid paper.

Mathematics

Year 5

Below Satisfactory

Geometry – Location and transformation

Location & Transformation – Year 5

- Draw three different 2 dimensional shapes in the first column.
- In the first row, show how the shape can be translated in different ways. Describe what you did.
- In the second row, show how the shape can be rotated in different ways. Describe what you did.
- In the third row, show how the shape can be reflected. Describe what you did.
- Show how many lines of symmetry each shape has.

Shape 1 (Translate)				
Shape 2 (Rotate)				
Shape 3 (Reflect)				

On the left side of the grid draw a simple picture. Enlarge the same picture on the right side of the grid. By how much have you enlarged it? Explain your thinking.

Annotations

Demonstrates that shape remains the same under translation.

Understands that rotating changes position but not shape.

Recognises that enlargement increases the size of the object.

Number – Number sentences

Number Sentences

Instructions!

- Choose 15 different numbers between 0 and 100
- Express each number in two different ways using mixed operations

	Number	First way	Second way
	Eg. 3	$3 = 6 \times 4 - 3 \times 7$	$3 = 56 \div 7 \div 2 - 1$
1.	5	$5 = 2 + 3$	$5 = 10 - 5$
2	10	$10 = 5 \times 2$	$10 = 5 + 5$
3	12	$12 = 3 \times 4$	$12 = 10 + 2$
4	15	$15 = 20 - 10$	$15 = 10 + 5$
5	20	$20 = 2 \times 10$	$20 = 10 + 10$
6	25	$25 = 20 + 5$	$25 = 30 - 5$
7	30	$30 = 20 + 10$	$30 = 25 + 5$
8	36	$36 = 40 - 4$	$36 = 30 + 6$
9	40	$40 = 2 \times 20$	$40 = 80 \div 2$
10	50	$50 = 100 \div 2$	$50 = 10 + 40$
11	60	$60 = 30 + 30$	$60 = 100 - 40$
12	70	$70 = 100 - 30$	$70 = 2 \times 30$
13	80	$80 = 2 \times 40$	$80 = 40 + 40$
14	90	$90 = 100 - 10$	$90 = 45 + 45$
15	100	$100 = 10 \times 10$	$100 = 50 + 50$

Annotations

*Performs operations in the correct order.**Uses one operation to make the number.*

Students use a grid reference system to locate landmarks. They measure and construct different angles. Students list outcomes of chance experiments with equally likely outcomes and assign probabilities between 0 and 1. Students pose questions to gather data, and construct data displays appropriate for the data.

Summary of task

This task was the culmination of a series of activities dealing initially with the language of chance and then conducting simple chance experiments. The students had discussed fair and unfair spinners and the numerical chance of a particular result happening.

Students were required to make 3 spinners. One of the spinners had 4 colours but there was not an equal chance of spinning each colour. The second spinner had 6 numbers on it with an equal chance of spinning each number and the third spinner had 6 numbers on it with an unequal chance of spinning each of the numbers. Students were required to pose questions, predict the chance of the outcomes and then conduct the task. Students were asked to record all answers in tables and graphs. After completing the task students compared their results to other class members and interpreted the results.
