WORK SAMPLE PORTFOLIO

The 2012 portfolios are a resource to support teachers in planning and implementation of the Foundation to Year 10 Australian Curriculum in the learning area. Each portfolio comprises a collection of student work illustrating evidence of student learning in relation to the achievement standard. At every year level there are three portfolios illustrating satisfactory, above satisfactory and below satisfactory achievement in relation to the standard.

Each portfolio comprises a collection of different student work selected by state and territory nominees, and annotated and reviewed by classroom teachers and other curriculum experts. Each work sample in the portfolio varies in terms of how much time was available to complete the task and/or the degree of scaffolding provided by the teacher.

There is no pre-determined number of student work samples in a portfolio nor are they sequenced in any particular order. Together as a portfolio, the samples provide evidence of all aspects of the achievement standard unless otherwise specified.

As the Australian Curriculum is progressively implemented in schools, the portfolios will continue to be reviewed and enhanced in relation to their comprehensiveness in coverage of the achievement standard and their representation of the diversity of student work that can be used to highlight evidence of student learning.

THIS PORTFOLIO – Year 5 Mathematics

This portfolio comprises a number of work samples drawn from a range of assessment tasks, namely:

Sample 1	Geometry – My angle
Sample 2	Measurement – Garden bed
Sample 3	Number – Treasure Hunt
Sample 4	Measurement – How many can you make?
Sample 5	Number – Who are the fastest swimmers?
Sample 6	Measurement – Using time
Sample 7	Measurement – Using perimeter and area
Sample 8	Geometry – Location and transformation
Sample 9	Number – Number sentences
Sample10	Geometry – Mapping
Sample 11	Statistics and Probability – Come in spinner

This portfolio of student work shows the measurement and construction of different angles (WS1), comparison of the sizes of fractions by diagrams and calculations and their representation on a number line (WS2, WS5). The student solves problems using the four operations (WS3, WS9) and makes spinners to assist in carrying out simple probability experiments before evaluating the results (WS 11). The student investigates the areas and perimeters of different rectangles (WS7). The student explains the effect of transformations (WS8), locates axes of symmetry of shapes and describes the features of three-dimensional objects using two-dimensional representations (WS4). The student creates maps, locates landmarks and describes directions to locations (WS10). The student converts between 12 and 24 hour time (WS6).

Mathematics

Year 5
Satisfactory

The annotated samples in this portfolio provide evidence of most (but not necessarily all) aspects of the achievement standard. The following aspect/s of the achievement standard are not evident in this portfolio:

- *explain plans for simple budgets*
- *compare and interpret different data sets*
- *use appropriate units of measurement for volume, capacity and mass*
- *assign probabilities between 0 and 1*
- *pose questions to gather data*
- *check the reasonableness of answers using estimation and rounding.*

Mathematics

Year 5
Satisfactory

Geometry – My angle

Relevant parts of the achievement standard

By the end of Year 5, students solve simple problems involving the four operations using a range of strategies. They check the reasonableness of answers using estimation and rounding. Students identify and describe factors and multiples. They explain plans for simple budgets. Students connect three-dimensional objects with their two-dimensional representations. They describe transformations of two-dimensional shapes and identify line and rotational symmetry. Students compare and interpret different data sets.

Students order decimals and unit fractions and locate them on number lines. They add and subtract fractions with the same denominator. Students continue patterns by adding and subtracting fractions and decimals. They find unknown quantities in number sentences. They use appropriate units of measurement for length, area, volume, capacity and mass, and calculate perimeter and area of rectangles. They convert between 12 and 24 hour time. Students use a grid reference system to locate landmarks. They measure and construct different angles. Students list outcomes of chance experiments with equally likely outcomes and assign probabilities between 0 and 1. Students pose questions to gather data, and construct data displays appropriate for the data.

Summary of task

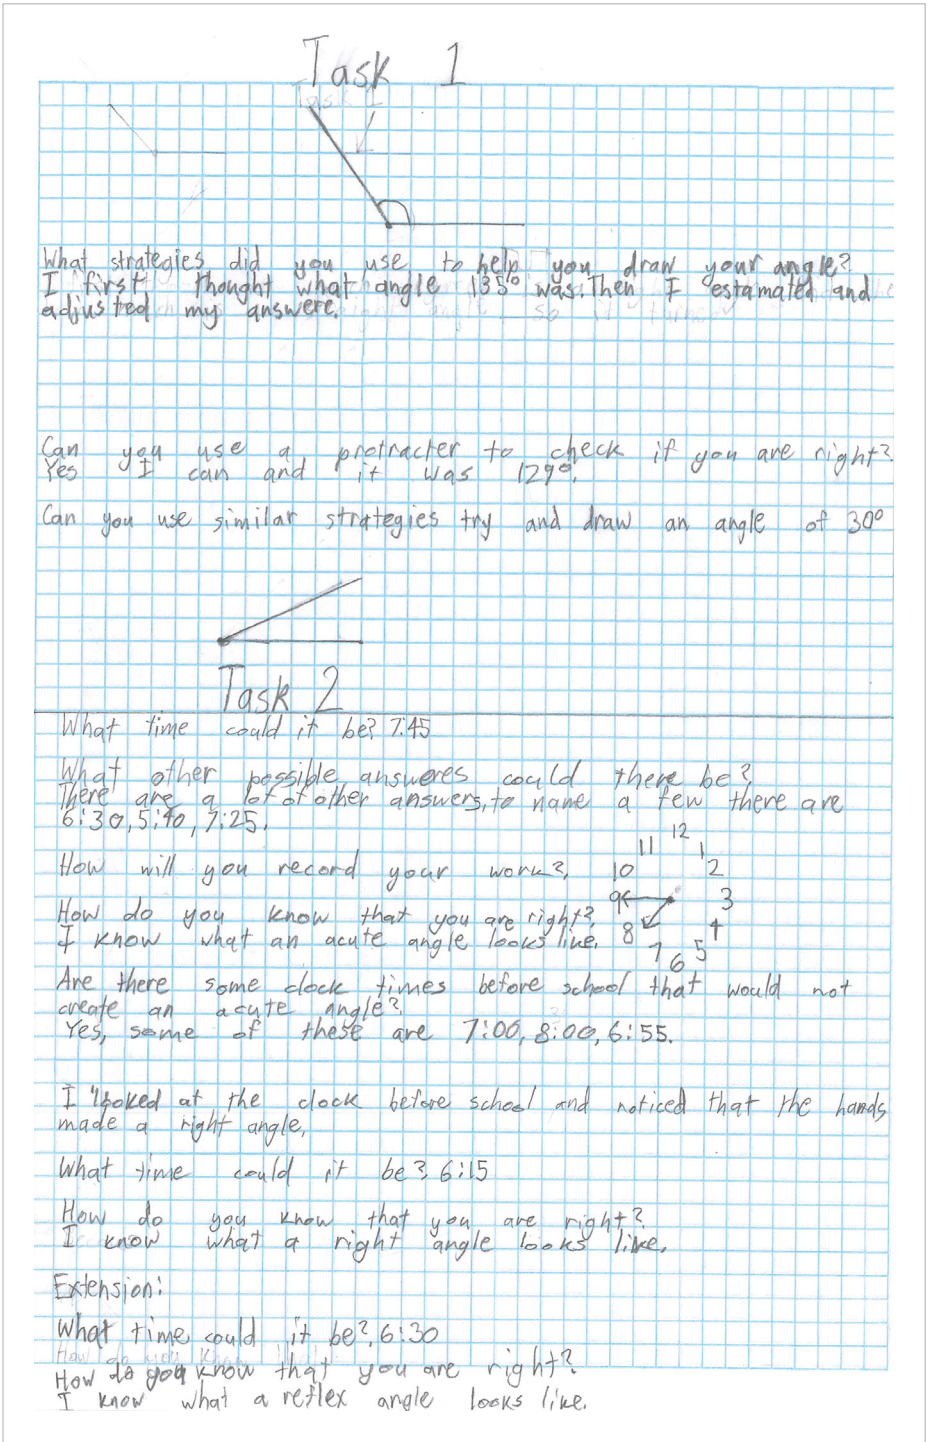
Students had completed a unit of work on angles and their properties. They were given the following problems to solve:

- *Can you estimate and draw an angle of approximately 135° without using a protractor?*
- *I looked at the clock before school and noticed that the hands made an acute angle. What time could it be?*
- *I looked at the clock before school and noticed that the hands made a right angle. What time could it be? How do you know that you are right?*
- *I looked at the clock before school and noticed that the hands made a reflex angle. What time could it be? How do you know that you are right?*

Mathematics

Year 5
Satisfactory

Geometry – My angle



Task 1

What strategies did you use to help you draw your angle?
I first thought what angle 135° was. Then I estamated and adjusted my answere.

Can you use a protracter to check if you are right?
Yes I can and it was 129°.

Can you use similar strategies try and draw an angle of 30°

Task 2

What time could it be? 7:45

What other possible answeres could there be?
There are a lot of other answers, to name a few there are 6:30, 5:40, 7:25.

How will you record your work?

How do you know that you are right?
I know what an acute angle looks like.

Are there some clock times before school that would not create an acute angle?
Yes, some of these are 7:00, 8:00, 6:55.

I looked at the clock before school and noticed that the hands made a right angle.

What time could it be? 6:15

How do you know that you are right?
I know what a right angle looks like.

Extension:

What time could it be? 6:30

How do you know that you are right?
I know what a reflex angle looks like.

Annotations

Estimates and constructs an angle.

Records angles using degrees.

Measures angles with a protractor.

Identifies angles in real life contexts.

Measurement – Garden bed

Relevant parts of the achievement standard

By the end of Year 5, students solve simple problems involving the four operations using a range of strategies. They check the reasonableness of answers using estimation and rounding. Students identify and describe factors and multiples. They explain plans for simple budgets. Students connect three-dimensional objects with their two-dimensional representations. They describe transformations of two-dimensional shapes and identify line and rotational symmetry. Students compare and interpret different data sets.

Students order decimals and unit fractions and locate them on number lines. They add and subtract fractions with the same denominator. Students continue patterns by adding and subtracting fractions and decimals. They find unknown quantities in number sentences. They use appropriate units of measurement for length, area, volume, capacity and mass, and calculate perimeter and area of rectangles. They convert between 12 and 24 hour time. Students use a grid reference system to locate landmarks. They measure and construct different angles. Students list outcomes of chance experiments with equally likely outcomes and assign probabilities between 0 and 1. Students pose questions to gather data, and construct data displays appropriate for the data.

Summary of task

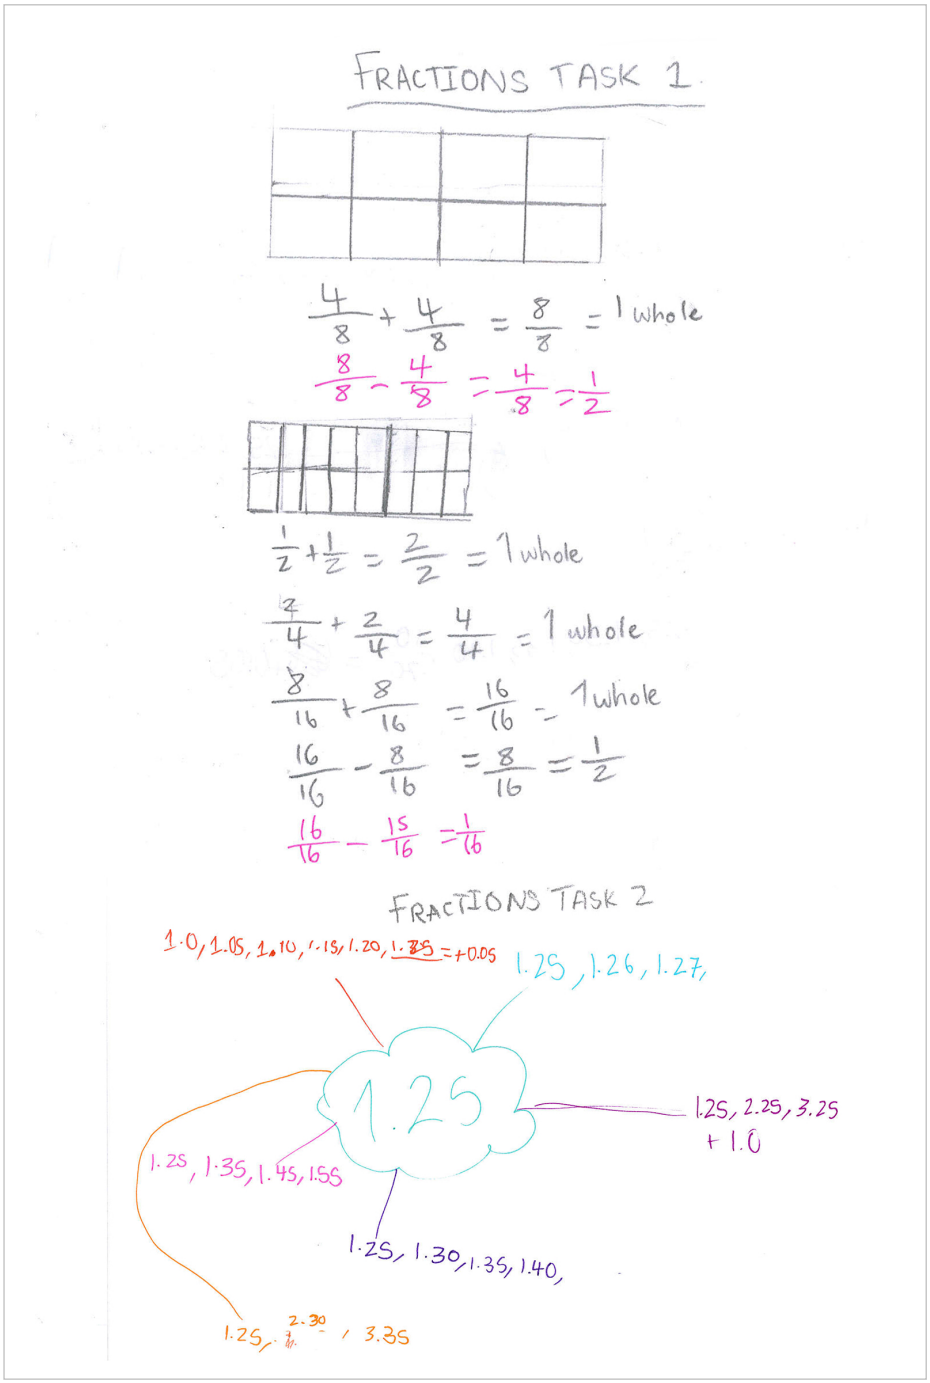
Students had completed a unit of work on fractions and decimals. They were asked to complete two tasks:

- *Divide a large rectangular garden bed into a number of equal plots. What addition and subtraction sentences can you create with fractions by looking at your garden?*
- *Tom created a number pattern which included the decimal 1.25. What could the pattern be?*

Mathematics

Year 5
Satisfactory

Measurement – Garden bed



Annotations

Calculates addition and subtraction of fractions with equivalent denominators.

Creates and continues decimal patterns using hundredths, tenths and wholes.

Students use a grid reference system to locate landmarks. They measure and construct different angles. Students list outcomes of chance experiments with equally likely outcomes and assign probabilities between 0 and 1. Students pose questions to gather data, and construct data displays appropriate for the data.

Summary of task

Students were given the following problem to solve after completing a unit of work on multiplication, division, factors and multiples:

- *A teacher is planning a treasure hunt for teams of students in Year 5 and Year 6. There are 48 Year 5 students and 60 Year 6 students. Each team has to have equal numbers and team members are from the same year level.*
- *What are all the possible team sizes that can participate in the treasure hunt?*
- *What are the largest possible group sizes that our teacher can have?*

Mathematics

Year 5

Students pose questions to gather data, and construct data displays appropriate for the data.

Summary of task

Students had been studying a unit of work based on data from the Olympic Games. They had become familiar with ordering decimals on a number line, time in seconds, tenths of seconds and hundredths of seconds.

Students were given tables with information about the results of the Men's 100m Freestyle Semi-Finals from the London Olympic Games. They were asked to order the results from fastest to slowest. They then completed further ordering of decimals and located them on a number line. Students were also asked to think about what could be done in one hundredth of a second.

Number – Who are the fastest swimmers?

Who Were the Fastest 100m Swimmers of 2012?

The tables below contain information from the Men's 100m Freestyle Semi-Finals from the 2012 London Olympic Games.

Task 1
Order the results from fastest to slowest performance, 1st-16th place.

Semi-Final 1

Lane	Athlete	Country	Time in Seconds	Placing
01	GILOT Fabien	France	48.49	11th
02	CIELO Cesar	Brazil	48.17	5th
03	FRASER Brett	Cayman islands	48.92	15th
04	LOUW Gideon	South Africa	48.44	9th
05	MAGNUSSEN James	Australia	47.63	1st
06	LOBINTSEV Nikita	Russia	48.38	8th
07	ROBERTS James	Australia	48.57	12th
08	FRASER Shaune	Cayman Islands	49.07	16th

Semi-Final 2

Lane	Athlete	Country	Time in seconds	Placing
01	AGNEL Yannick	France	48.23	7th
02	JONES Cullen	USA	48.60	14th
03	HAYDEN Brent	Canada	48.21	6th
04	ADRIAN Nathan	USA	47.97	2nd
05	VERSCHUREN Sebastiaan	Netherlands	48.13	4th
06	TIMMERS Pieter	Belgium	48.57	12th
07	CZERNIAK Konrad	Poland	48.44	9th
08	GARCIA Hanser	Cuba	48.04	3rd

Annotations

Orders decimal numbers from lowest to highest.

Number – Who are the fastest swimmers?

Who Were the Fastest 100m Swimmers of 2012?

Task 2

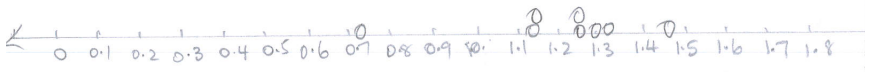
i) Calculate the athletes with the 8 fastest times and record them in the final, in the correct lanes.

The current world record for the 100m men's freestyle is 46.91 seconds set by Cesar Cielo in Rome on 30/07/09.

ii) Calculate the difference between each athlete's semi-final at the London Olympics and compare it to the current world record. Record the difference in the table.

Final

Lane		Athlete	Difference World Record Time
Lane 1	7th fastest	Yannick Agnel	+ 1.30 secs
Lane 2	5th fastest	Cesar Cielo	+1.26secs
Lane 3	3rd fastest	Hanser Garcia	+1.13 secs
Lane 4	1st fastest	James Magnussen	+0.72 secs
Lane 5	2nd fastest	Nathen Adrian	+1.06 secs
Lane 6	4th fastest	Sebastiaan Verschuren	+1.22 secs
Lane 7	6th fastest	Brent Haden	+1.30secs
Lane 8	8th fastest	Nikita Lobintsev	+1.47secs



Annotations

Compares two decimals to calculate the difference.

Constructs and orders decimals on a number line.

Locates decimals on a number line appropriately.

Measurement – Using perimeter and area

Relevant parts of the achievement standard

By the end of Year 5, students solve simple problems involving the four operations using a range of strategies. They check the reasonableness of answers using estimation and rounding. Students identify and describe factors and multiples. They explain plans for simple budgets. Students connect three-dimensional objects with their two-dimensional representations. They describe transformations of two-dimensional shapes and identify line and rotational symmetry. Students compare and interpret different data sets.

Students order decimals and unit fractions and locate them on number lines. They add and subtract fractions with the same denominator. Students continue patterns by adding and subtracting fractions and decimals. They find unknown quantities in number sentences. They use appropriate units of measurement for length, area, volume, capacity and mass, and calculate perimeter and area of rectangles. They convert between 12 and 24 hour time. Students use a grid reference system to locate landmarks. They measure and construct different angles. Students list outcomes of chance experiments with equally likely outcomes and assign probabilities between 0 and 1. Students pose questions to gather data, and construct data displays appropriate for the data.

Summary of task

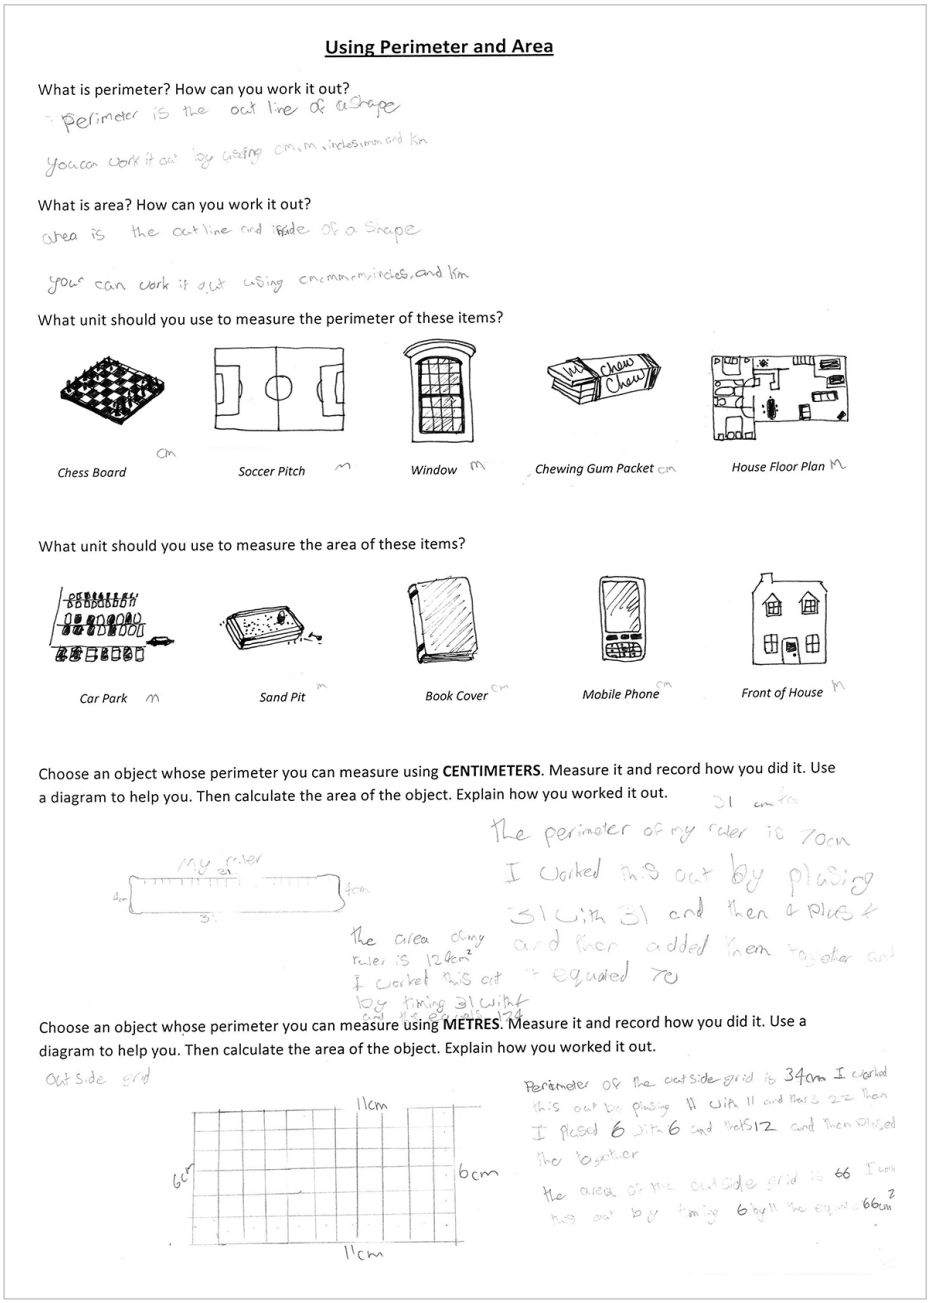
Students had completed a unit of work on perimeter and area. They had been given opportunities to practise measuring objects using millimetres, centimetres, metres and calculate area using cm^2 and m^2.

Students were asked to define area and perimeter and explain how each is calculated. They were then asked to choose shapes to measure and to calculate the perimeter and area of each. They were also asked to identify what units should be used to measure the length of items.

Mathematics

Year 5
Satisfactory

Measurement – Using perimeter and area



Using Perimeter and Area

What is perimeter? How can you work it out?

- perimeter is the out line of a shape

You can work it out by using cm, m, inches, mm and km

What is area? How can you work it out?

area is the out line and inside of a shape

your can work it out using cm, mm, m, inches, and km

What unit should you use to measure the perimeter of these items?

Chess Board cm | Soccer Pitch m | Window m | Chewing Gum Packet cm | House Floor Plan m

What unit should you use to measure the area of these items?

Car Park m | Sand Pit m | Book Cover cm | Mobile Phone cm | Front of House m

Choose an object whose perimeter you can measure using **CENTIMETERS**. Measure it and record how you did it. Use a diagram to help you. Then calculate the area of the object. Explain how you worked it out.

My ruler 31 / 4cm / 31

The perimeter of my ruler is 70cm I worked this out by plusing 31 with 31 and then 4 plus 4 and then added them together and equated 70

The area of my ruler is 124cm² I worked this out by timing 31 with 4 and it equals 124

Choose an object whose perimeter you can measure using **METRES**. Measure it and record how you did it. Use a diagram to help you. Then calculate the area of the object. Explain how you worked it out.

Out side grid

11cm / 6cm / 11cm / 6cm

Perimeter of the out side grid is 34cm I worked this out by plusing 11 with 11 and that's 22 then I plused 6 with 6 and that's 12 and then plused the together

The area of the out side grid is 66 I worked this out by timing 6 by 11 the equal is 66cm²

Annotations

Gives a basic explanation of perimeter and area.

Chooses appropriate units to measure items.

Calculates area and perimeter of four sided figures.

Number – Number sentences

Number Sentences

Instructions!

- Choose 15 different numbers between 0 and 100
- Express each number in two different ways using mixed operations

	Number	First way	Second way
	Eg. 3	3= 6 x 4 – 3 x 7	3 = 56÷7÷2 - 1
1.	10	10 = 2×3+4	10 = 5×5 – 15
2	12	12 = 5×2+2	12 = 4×5 – 8
3	20	20 = 5×5–5	20 = 4×4 + 4
4	35	35 = 6×5+5	35 = 7×7 – 2×7
5	48	48 = 9×5 + 3×1	48 = 10×10 – 26×2
6	50	50 = 1000÷10÷2	50 = 10+ 20×2
7	55	55 = 10×5+5	55 = 5×12 –5
8	75	75 = 10×10–5×5	75 = 2×35 + 5
9	80	80 = 2×2×2×10	80 = 2×2×4×5
10	85	85 = 100 – 3×5	85 = 2×10×4+5
11	25	25 = 4×2+17×1	25 = 3×10 – 5
12	40	40 = 2×2×2×5	40 = 10×10 – 3×2×10
13	56	56 = 5×12 – 2×2	56 = 25×2 + 2×3
14	72	72 = 10×10–4×7	72 = 2×2×2×3×3
15	100	100 = 2×2×5×5	100 = 1000 000 ÷ 10000

Annotations

Uses more than one operation to make the number.

Performs operations in the correct order.

They describe transformations of two-dimensional shapes and identify line and rotational symmetry. Students compare and interpret different data sets.

Students order decimals and unit fractions and locate them on number lines. They add and subtract fractions with the same denominator. Students continue patterns by adding and subtracting fractions and decimals. They find unknown quantities in number sentences. They use appropriate units of measurement for length, area, volume, capacity and mass, and calculate perimeter and area of rectangles. They convert between 12 and 24 hour time. Students use a grid reference system to locate landmarks. They measure and construct different angles. Students list outcomes of chance experiments with equally likely outcomes and assign probabilities between 0 and 1. Students pose questions to gather data, and construct data displays appropriate for the data.

Summary of task

This task was the culmination of a series of activities dealing initially with the language of chance and then conducting simple chance experiments. The students had discussed fair and unfair spinners and the numerical chance of a particular result happening.

Students were required to make 3 spinners. One of the spinners had 4 colours but there was not an equal chance of spinning each colour. The second spinner had 6 numbers on it with an equal chance of spinning each number and the third spinner had 6 numbers on it with an unequal chance of spinning each of the numbers. Students were required to pose questions, predict the chance of the outcomes and then conduct the task. Students were asked to record all answers in tables and graphs. After completing the task students compared their results to other class members and interpreted the results.

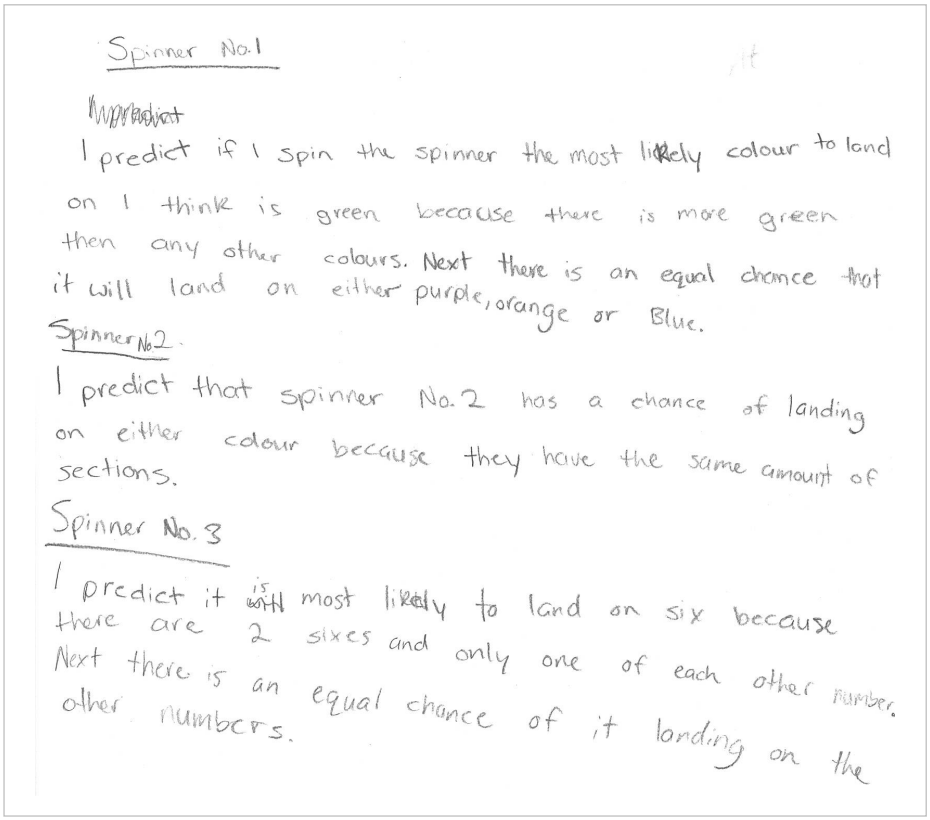
Statistics and Probability – Come in spinner



Spinner No.1

I predict if I spin the spinner the most likely colour to land on I think is green because there is more green then any other colours. Next there is an equal chance that it will land on either purple, orange or Blue.

Spinner No.2

I predict that spinner No. 2 has a chance of landing on either colour because they have the same amount of sections.

Spinner No. 3

I predict it is will most likely to land on six because there are 2 sixes and only one of each other number. Next there is an equal chance of it landing on the other numbers.

Annotations

Makes informed predictions about the possible results of the experiment for different specified spinners.

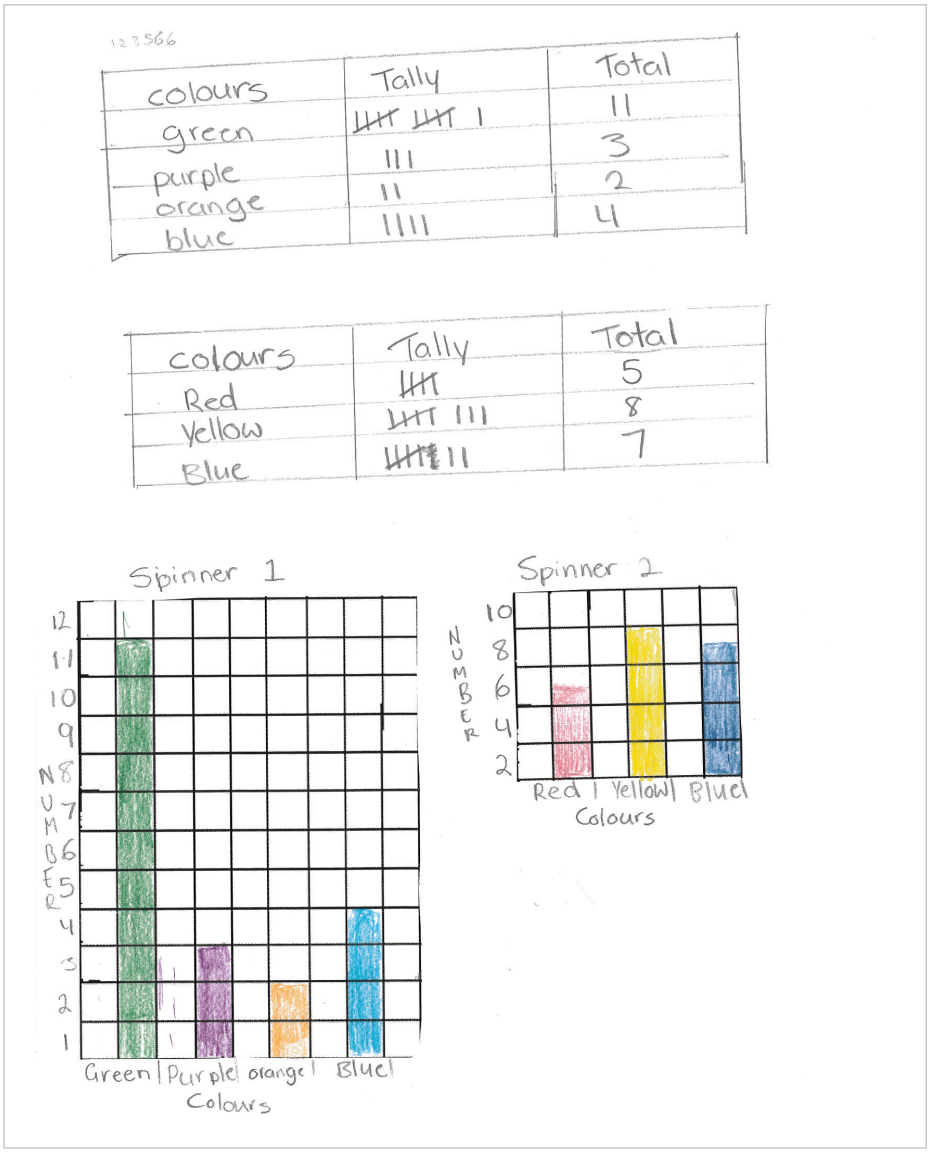
Statistics and Probability – Come in spinner



colours	Tally	Total
green	𝍸 𝍸 I	11
purple	III	3
orange	II	2
blue	IIII	4

colours	Tally	Total
Red	𝍸	5
Yellow	𝍸 III	8
Blue	𝍸 II	7

Annotations

Records the results of the experiment using tally marks and totals.

Displays data correctly in a column graph.

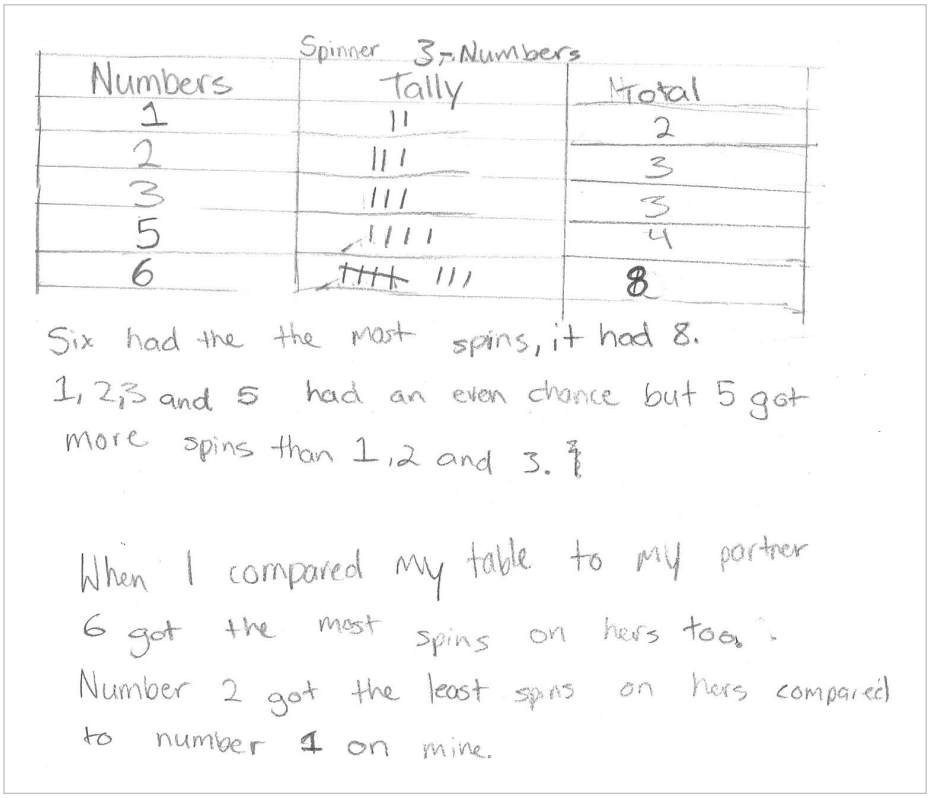
Statistics and Probability – Come in spinner



Spinner 3 Numbers

Numbers	Tally	Total
1	II	2
2	III	3
3	III	3
5	IIII	4
6	~~IIII~~ III	8

Six had the the most spins, it had 8.
1, 2, 3 and 5 had an even chance but 5 got more spins than 1, 2 and 3.

When I compared my table to my partner 6 got the most spins on hers too. Number 2 got the least spins on hers compared to number 1 on mine.

Annotations

Compares results of chance experiments.
